Foreword

This directory contains references to the acts and regulations aiming especially at the safety and health of working people in Canada. It also incorporates other legislation having an impact on the welfare of workers such as air pollution control, the safe construction of buildings in general and safety standards in the transportation industry.

For each jurisdiction, there is mention of various topics that are important to the safety and health of workers. Indications are given, through the use of a code, concerning the legislation which deals with these topics. The first number of the code refers to the authority responsible for the legislation, the letter relates to the Act concerned and the second number to the pertinent regulations which have been adopted.

This directory, which was prepared in past years by Michel Gauvin, has been revised by Louis Lemire. It includes the most recent information made available to the Legislative Analysis and Research Division and for the most part is up to date as of January 1, 1984.

Because of the rapid changes in this field of legislation, this publication is revised on an annual basis. Should there be any error or omission in this issue, we would be grateful if you could let us know so that we may correct them in next year's directory. To do so or for any other comments, you may contact: L. Lemire, Legislative Analysis and Research, Labour Canada, Ottawa, Ontario, K1A 0J2; Tel. (819) 997-3920.

It must be noted that our services do not provide copies of acts or regulations. Normally, these can be obtained from the department, board or agency which is charged with the administration of the legislation as indicated in the publication or from the Queen's Printer of the jurisdiction concerned (in Quebec: Editeur officiel).
